

Individual Project Summaries

Auburn Management

COTTON FIBER QUALITY: Characterization, Selection, and Optimization	1
Utilization of Continuously Monitored Data in Product Improvement	2
Design of a Braiding Machine to Produce Wide, Flat Woven Structure at Significantly Increased Production Rate	3
Source Reduction Of Pollutants From Textile Processing Waste Water	4
Computer-Integrated Prototype to Enhance Demand Responsive Manufacturing for the Domestic Apparel Industry	7
Computer-Integrated Forecasting for Demand-Activated Product Development, Production, and Merchandising	7
Marketing U.S. Apparel Products In Mexico	9
MFA Phaseout: Implications for the U.S. Fibers/Textiles/ Fabricated Products Complex	9

Clemson Management

Improved Methods for Determining a Reliable Index of Fabric Preparation Quality	10
Material And Machine Interactions During Weaving	10
Dimensional Stability, Aesthetic, And Mechanical Properties Of Micro-Fiber Blended Knitted Fabrics	12
Evaluation of the Utilization of Supercritical Fluid Technology for Analytical, Process and Environmental Applications in Textiles	14
Production and Properties of Fine- and Micro- Denier Fibers	15
Production And Characterization Of Textile Fibers Formed From Intrinsically Electrically Conductive Polymers	15
Chaos in Polymer Phase Transitions	16
The Use of Instrumental Analysis to Determine Quality Characteristics and Processing Performance of Reclaimed Fiber Mixtures	16

Georgia Tech Management

Development of Practical and Comfortable Barrier Textile Systems	17
Advanced Application of Statistical & Fuzzy Control to Textile Processes	19
Fundamental Studies for the Utilization of Carpet Waste	21
Flexible Short Run Yarn And Fabric Formation	21
Coloration Systems For Quick Response Manufacturing	22
System Modeling for Apparel Manufacturing: Focus on the Cutting Room	23
Wastewater Decolorization using Chitin and Detection of Trace Toxic Impurities in High Volume Raw Material	23

North Carolina State Management

Synthetic Dyes Based On Toxicological Considerations	24
Characterization And Control Of Fabric Properties In Textile And Apparel Manufacturing	25
Analysis/Modeling of Actions and Interactions of FTAR Firms	26
Dynamics of High-Speed Yam Transport in Textile Processes	28
Electrotechnology Applications In Textile Manufacturing	29
Projection of U.S. Apparel Demand and Consumer Profiles Based on Demographic Changes for the Period 1991 . 2010.	30
Fundamental and Practical Aspects of the Perception and Analysis of Real and Illusory Appearance Defects in Fabric	32
Real-Time Data Acquisition, Theoretical Modeling, and Adaptive Control of Batch Dyeing Processes	33
CIM in the FTA Industrial Complex	34
Textile Structures For Composites	35
Development of Multiphase Warp-Wave Air-Jet Loom	37
Development Of Unique Fibers Using Renewable Resources Via Environmentally Friendly Technology	37
Tomographic Approaches To Nonwovens Structure Definition	38

Completed Projects

Globalization, 1970 to 1992: Structures and Strategies for Success in the International Textile-Apparel-Retail Arena	38
HVI Subsystem for Fiber Surface and Fracture Characterization by Acoustic Spectrum Analysis	39
